

The figure displays a scatter plot with four distinct clusters of data points, each represented by a different color and marker shape. The clusters are:

- Red Cluster (Circles):** Located in the bottom-left quadrant, showing a dense group of points with values ranging from approximately 100 to 350.
- Blue Cluster (Pluses):** Located in the bottom-center, forming a small, elongated group with values ranging from approximately 200 to 300.
- Purple Cluster (Squares):** Located in the bottom-right quadrant, forming a small, elongated group with values ranging from approximately 180 to 380.
- Green Cluster (Squares):** Located on the right side of the plot, forming a long, upward-sloping line with values ranging from approximately 856 to 1156.

Each point is labeled with a numerical value. The background features a light gray grid.
